

Department of Artificial Intelligence and Multimedia Gaming

Lab # 09	Application of ICT (Fall-2025)
Course Title:	Application of ICT
Lab Instructor:	Rashida Naz
Credits (Theory + Lab):	3 Credit Hours (2 Hrs Theory and 1 Hr Lab)
Lab Duration:	2 Hrs
Lab Title:	HTML Links
Tools Needed	Notepad++, VS Code

Lab Objectives:

- To understand the concept and syntax of Inline CSS.
- To learn the process of inserting Links and Bookmarks
- To learn the process of inserting a favicon into a webpage.

Lab Outcomes:

After completing this lab, students will be able to:

1. Apply inline CSS styles to specific HTML elements effectively.

Lab Tasks

Task # 1

Use target="_blank" to open the linked document in a new browser window or tab:

```
<!DOCTYPE html>
<html>
<body>

<h2>The target Attribute</h2>

<a href="https://aror.edu.pk/" target="_blank">Visit Aror
University's Website</a>

<p>If target="_blank", the link will open in a new browser
window or tab.</p>

</body>
```

```
</html>
```

Output:

The target Attribute

[Visit Aror University's Website](#)

If target="_blank", the link will open in a new browser window or tab.

Absolute URLs vs. Relative URLs

Both examples above are using an **absolute URL** (a full web address) in the href attribute.

A local link (a link to a page within the same website) is specified with a **relative URL** (without the "https://www" part):

Task # 2

Insert Absolute and Relative URLs.

```
<!DOCTYPE html>
<html>
<body>

<h2>Absolute URLs</h2>
<p><a href="https://www.w3.org/" target="_blank">W3C</a></p>
<p><a href="https://www.google.com/"
target="_blank">Google</a></p>

<h2>Relative URLs</h2>
<p><a href="html_images.asp">HTML Images</a></p>
<p><a href="/css/default.asp">CSS Tutorial</a></p>

</body>
</html>
```

HTML Links - Use an Image as a Link

To use an image as a link, just put the tag inside the <a> tag:

Task # 3

Insert a clickable Image which opens a URL

```
<a href="https://aror.edu.pk/">

</a>
```

Link to an Email Address

Use mailto: inside the href attribute to create a link that opens the user's email program (to let them send a new email):

Task # 4

Create a Link that opens the user's email program

```
<a href="mailto:someone@example.com">Send email</a>
```

Link Titles

The title attribute specifies extra information about an element. The information is most often shown as a tooltip text when the mouse moves over the element.

Task # 5

```
<a href="https://aror.edu.pk/" title="Official site">  
Aror  
</a>
```

Examples

Link to a page located in the lab 8 folder on the current web site:

```
<a href="/lab8/index.html">HTML tutorial</a>
```

Note: you should have a folder called lab 8 and your file should be stored in the same folder. Moreover, the file you are going to link should also be saved in the same folder.

Recap of the lab

- Use the `<a>` element to define a link
- Use the `href` attribute to define the link address
- Use the `target` attribute to define where to open the linked document
- Use the `<img>` element (inside `<a>`) to use an image as a link
- Use the `mailto:` scheme inside the `href` attribute to create a link that opens the user's email program
