

Lab 07 HTML

By: Rashida & Arifa

Outline

- How to create a Webpage
- Webpage Vs. Website
- HTML Introduction
- HTML Editors
- HTML Tags

How to create a web page and make it visible on the web?

- Open notepad/ Sublime text 3
- Type in the HTML code
- Save it as index.html on your PC's desktop
- Upload a web page to a web server that is connected to the Internet
- As a result your web page is accessible to anyone on the Internet
- Hurrah! You have done it!!!!!!!!!!!!!!

HTML

Hyper text Markup Language

What is HTML?

- HTML is the standard markup language for creating Web pages.
- HTML stands for Hyper Text Markup Language
- HTML describes the structure of a Web page
- HTML consists of a series of elements
- HTML elements tell the browser how to display the content
- HTML elements are represented by tags
- HTML tags label pieces of content such as "heading", "paragraph", "table", and so on
- Browsers do not display the HTML tags, but use them to render the content of the page

HTML Versions

Version	Year
HTML	1991
HTML 2.0	1995
HTML 3.2	1997
HTML 4.01	1999
XHTML	2000
HTML5	2014

First HTML Program

```
<!DOCTYPE html>
<html>
<head>
<title>Page Title</title>
</head>
<body>

<h1>My First Heading</h1>
<p>My first paragraph.</p>

</body>
</html>
```

My First Heading

My first paragraph.

Example Explained

- The `<!DOCTYPE html>` declaration defines this document to be HTML5
- The `<html>` element is the root element of an HTML page
- The `<head>` element contains meta information about the document
- The `<title>` element specifies a title for the document
- The `<body>` element contains the visible page content
- The `<h1>` element defines a large heading
- The `<p>` element defines a paragraph

HTML Tags

- HTML tags are element names surrounded by angle brackets:
- **<tagname>content goes here...</tagname>**

HTML Tags

- HTML tags normally come in pairs like `<p>` and `</p>`
- The first tag in a pair is the start tag, the second tag is the end tag
- The end tag is written like the start tag, but with a forward slash inserted before the tag name
- **Tip:** The start tag is also called the **opening tag**, and the end tag the **closing tag**

HTML Code

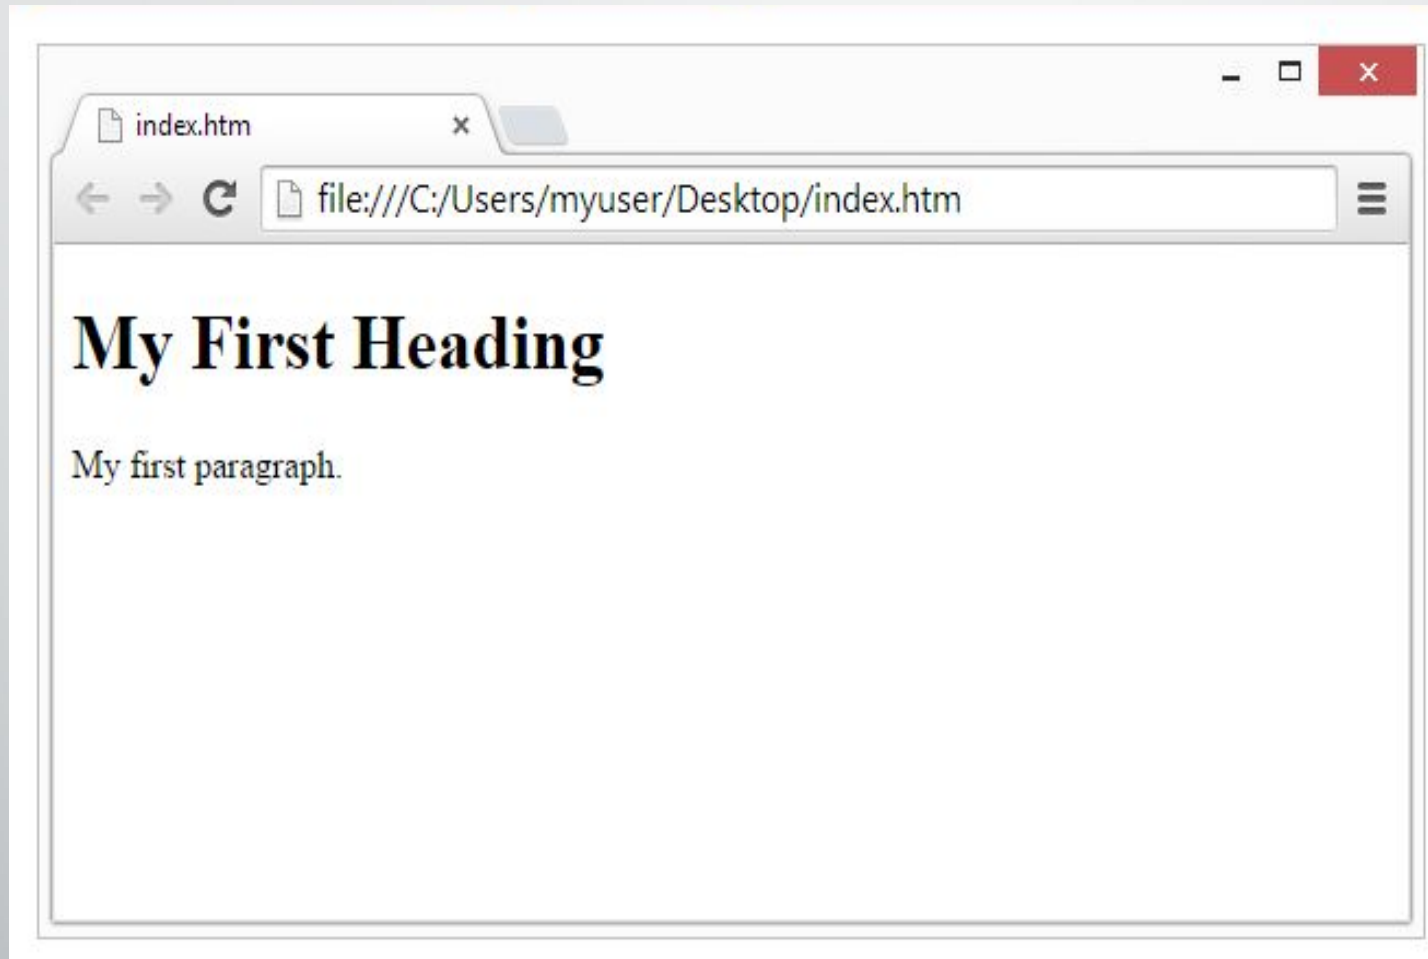

- `<!DOCTYPE html>`
- `<html>`
- `<head>`
- `<title>Page Title</title>`
- `</head>`
- `<body>`
- `<h1>My First Heading</h1>`
- `<p>My first paragraph.</p>`
- `</body>`
- `</html>`

Where will you write HTML code?

- Notepad
- Editor
 - Notepad++
 - Sublime Text
 - Dream viewer or any other suitable editor that you may like

Web Browsers

- The purpose of a web browser (Chrome, Edge, Firefox, Safari) is to read HTML documents and display them.
- The browser does not display the HTML tags, but uses them to determine how to display the document

HTML Structure

Below is a visualization of an HTML page structure:

`<html>`

`<head>`

`<title>Page title</title>`

`</head>`

`<body>`

`<h1>This is a heading</h1>`

`<p>This is a paragraph.</p>`

`<p>This is another paragraph.</p>`

`</body>`

`</html>`

The `<!DOCTYPE>` Declaration

- The `<!DOCTYPE>` declaration represents the document type, and helps browsers to display web pages correctly.
- It must only appear once, at the top of the page (before any HTML tags).
- The `<!DOCTYPE>` declaration is not case sensitive.
- The `<!DOCTYPE>` declaration for HTML5 is:
- `<!DOCTYPE html>`

<HTML>

...

...

</HTML>

**HTML tags that go in
the HEAD portion of a
Web page**

<HEAD>

...

...

</HEAD>

<TITLE> ... </TITLE>

**HTML tags that go in
the BODY portion of a
Web page**

<BODY>

...

...

</BODY>

$\langle P \rangle \dots \langle /P \rangle$

Paragraph

Line break

`<B> ... </B>`

Bold text

Example No. 1

```
<html>
```

```
<head>
```

```
<title>Aror Uni</title>
```

```
<!-- written for the Writing HTML Tutorial
```

```
by Rashida, October, 2025    -->
```

```
</head>
```

```
<body>
```

Aror University of Art, Architecture, Design & Heritage Sukkur revitalizes historical Aror, aiming to become a unique higher education institution by blending traditional values with cultural and religious diversity.

```
</body>
```

```
</html>
```

Example No. 2

```
<!DOCTYPE html>

<html>

<head>

<title>Aror Uni</title>

<!-- written for the Writing HTML Tutorial
      by Rashida, October, 2025      -->

</head>

<body>

<h1>Heading 1</h1>

<h2>Heading 2</h2>

<h3>Heading 3</h3>

<h4>Heading 4</h4>

<h5>Heading 5</h5>

<h6>Heading 6</h6>

</body>

</html>
```

HTML Editors

- Write HTML Using Notepad or TextEdit
- Web pages can be created and modified by using professional HTML editors.
- However, for learning HTML we recommend a simple text editor like Notepad (PC) or TextEdit (Mac).
- We believe using a simple text editor is a good way to learn HTML.
- Follow the steps below to create your first web page with Notepad or TextEdit

Step 1: Open Notepad (PC)

- **Windows 8 or later:**
 - Open the **Start Screen** (the window symbol at the bottom left on your screen). Type **Notepad**.
- **Windows 7 or earlier:**
 - Open **Start > Programs > Accessories > Notepad**

Step 2: Write Some HTML

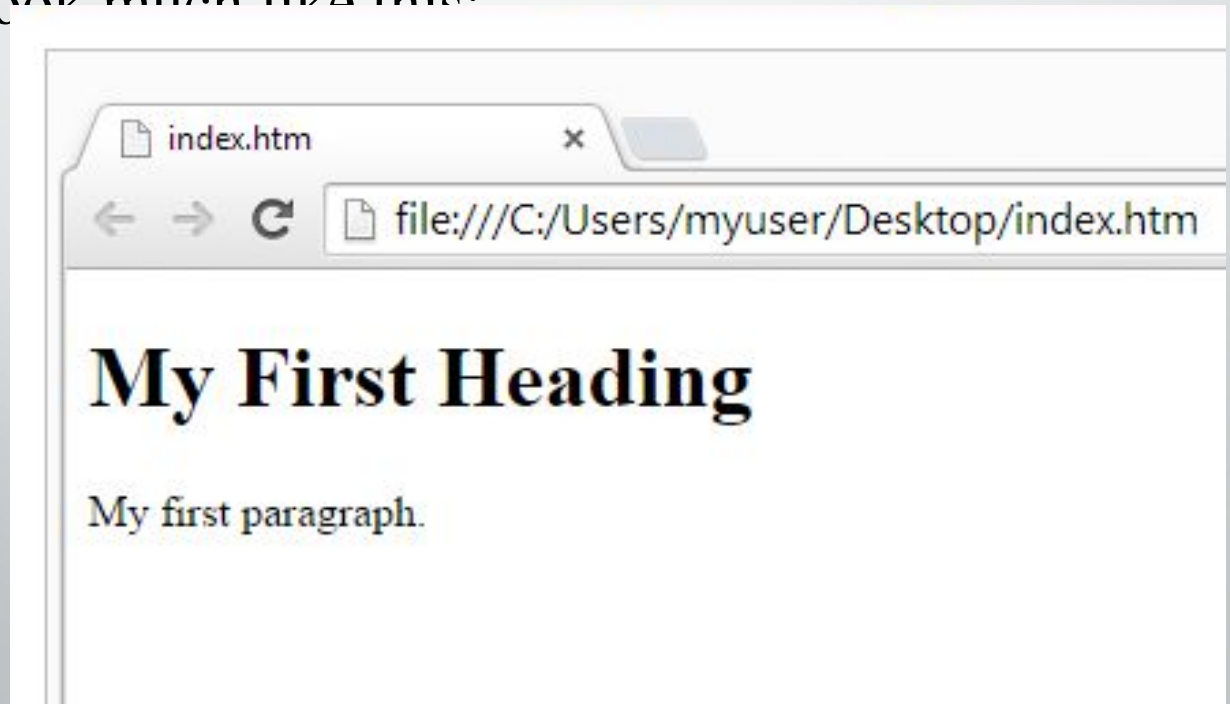

- `<!DOCTYPE html>`
- `<html>`
- `<head>`
- `<title>Page Title</title>`
- `</head>`
- `<body>`
- `<h1>My First Heading</h1>`
- `<p>My first paragraph.</p>`
- `</body>`
- `</html>`

Step 3: Save the HTML Page

- Save the file on your computer. Select **File > Save as** in the Notepad menu.
- Name the file "**index.htm**" and set the encoding to **UTF-8** (which is the preferred encoding for HTML files).
- You can use **index.htm** or **index.html**

Step 4: View the HTML Page in Your Browser

- Open the saved HTML file in your favorite browser (double click on the file, or right-click - and choose "Open with").
- The result will look much like this:

HTML Documents

- All HTML documents must start with a document type declaration: `<!DOCTYPE html>`.
- The HTML document itself begins with `<html>` and ends with `</html>`.
- The visible part of the HTML document is between `<body>` and `</body>`.

HTML Headings

- HTML headings are defined with the `<h1>` to `<h6>` tags.
- `<h1>` defines the most important heading. `<h6>` defines the least important heading

HTML Headings

- `<!DOCTYPE html>`
- `<html>`
- `<body>`

- `<h1>This is heading 1</h1>`
- `<h2>This is heading 2</h2>`
- `<h3>This is heading 3</h3>`
- `<h4>This is heading 4</h4>`
- `<h5>This is heading 5</h5>`
- `<h6>This is heading 6</h6>`

- `</body>`
- `</html>`

This is heading 1

This is heading 2

This is heading 3

This is heading 4

This is heading 5

This is heading 6

End of the lecture
